

# Compact D0 versus classical methods across held instruments

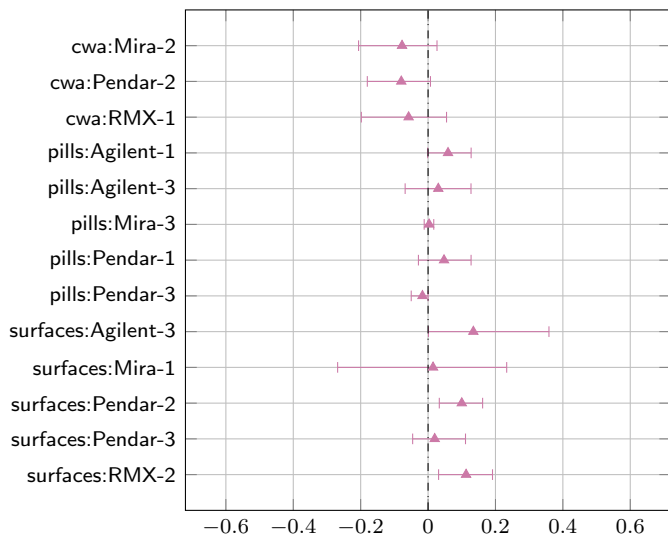

## A. C-SELECTED

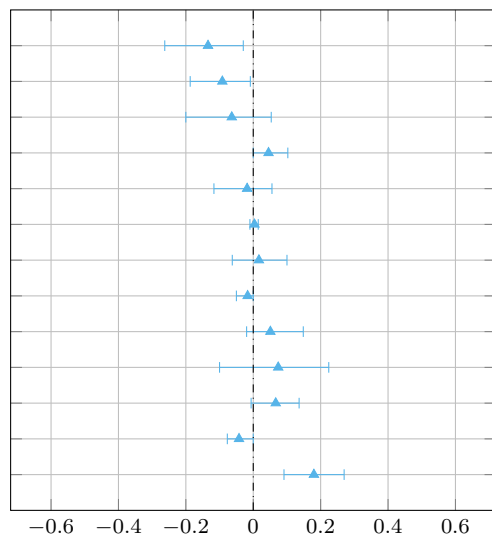

## B. C-RBF-SVM

## C. C-RANDOM-FOREST

## D. C-EXTRA-TREES

D0 minus classical BA

D0 minus classical BA

(P) RQ-P01; PP-U-MIN; source-only fitting; 598 spectra / 69 physical masters; 400–1,800  $\text{cm}^{-1}$ .

Triangles: pooled out-of-fold spectrum-BA differences in 13 held-instrument domains.

Intervals: 95% paired master bootstrap (5,000 draws); zero: no difference; positive: D0 favoured.
