

Selected CNN versus selected classical.

RQ-P01 (P/S). PP-U-MIN, 400–1800 cm^{-1} ; source-only selection. 69 physical masters, 557 held spectra, 13 station-instrument domains and ten instruments; 252/260 common contexts. Each dot is a domain mean, not a sample. M01 uses individual spectra; M06 combines predictions, not raw spectra. The diagonal denotes equality. Repeated contexts are not independent.
